The International Commission on Stratigraphy (ICS) has published the International Chronostratigraphic Chart, which provides a comprehensive overview of the Earth's stratigraphic history. The chart is designed to help scientists and researchers understand the temporal relationships between different geological formations and events. It includes numerical ages for key events and boundaries, as well as information on GSSPs (Boundary Stratotype Section and Points) for major boundaries. The chart is regularly updated to reflect the latest scientific discoveries and revisions in the field of stratigraphy.
